

Rimage Everest 600

Thermal Retransfer printer

*Rimage Redefines CD/DVD/Blu-ray Disc™
Publishing*

Product

The Rimage Everest 600 Thermal Retransfer printer sets a new standard for print resolution and quality: 600 dpi printing, unparalleled color management, photoquality images, and the sharpest text. All this results in the highest quality and most professional CD/DVD/BD publishing media in the industry.

Current Rimage customers immediately recognize the Everest 600's amazing advances. New Rimage customers understand quickly that the Everest 600 exceeds all industry expectations. In brief: Rimage thermal retransfer print technology delivers the fastest print times in all print modes, while never compromising durability or cost per disc. Best of all, the Everest 600 is offered on all Rimage Producer III and Professional series publishing systems.

Rimage customers expect the best. That's why Rimage is driven to maintain the status as the world's largest and most experienced full-line manufacturer of CD/DVD/Blu-ray Disc™ publishing, duplication and printing systems.

Professional organizations require professional, on-demand printing.

Applying a sticker or using a marker on a client disc is a disservice to any organization wanting to professionally present itself to customers. Forgo manual printing methods and start publishing discs with full-color photos, customized graphics, background colors, bar codes, and more. Printing right on the surface of specially coated CD, DVD, and Blu-ray Discs makes any project easy and fast.

The Everest 600 thermal retransfer printer provides customers with advantages, not available in other print technologies. These include:

- professional, consistent-looking discs
- permanent and durable printing
- scratchproof, waterproof, UV-resistant media
- fixed cost per disc
- fast speed and high throughput

Rimage Media Kits™ make life easy

Eliminate all concerns about ordering ribbons and discs separately when you select Rimage Media Kits — guaranteed to print and record properly. Designed to maximize print quality and customer convenience, Media Kits not only come preassembled with supplies for 1,000 or 10,000 discs (depending on kit), but they are also rigorously tested to ensure customers enjoy consistent output, disc after disc, day after day. Best of all, Rimage media provides an archival life of 100 years for CD-R and 50 years for DVD-R.

Worry-free maintenance

To maximize equipment uptime and customer satisfaction, Rimage offers a variety of warranty upgrades and post-warranty upgrades. Whether your operation requires 24/7 disc production or day-to-day use, Rimage has an agreement to fit your needs.

Specifications

Upgrade Kit Availability	Producer III Series (8100N, 8100, 7100N, 7100) Professional Series (5300N, 5100N)
Print Technology	Thermal retransfer color and black printing
Print Speeds (nominal)	CMY: 60 seconds per disc (photo and graphics mode) Black: 38 seconds per disc (photo mode only)
Print Resolution	600 x 600 DPI
